

# MobileDemand's Free Barcode Generator

Barcode labels are scannable symbols that represent product codes such as Universal Product Codes (UPC) and Stock Keeping Units (SKU). Barcodes are used to identify and track your inventory and ring product sales. By creating and using barcodes, you can access product details, view your inventory and speed up the checkout process.

## Barcode Generator

Barcode Generator allows you to generate individual printable and scannable barcodes in a matter of seconds. Barcode Sheet tab function enables multiple 1"x2-5/8" barcodes to be laid out in a grid pattern and printed in sheet form.

GENERATE BARCODE

### Types of barcodes

**EAN-13.** The European Article Numbering System (EAN) is a superset of U.P.C. EAN-13 consists of 13 numbers.

**UPC-A.** The Universal Product Code (UPC) barcode is used in the retail industry. UPC-A consists of 12 numbers.

**EAN-8.** The European Article Numbering System (EAN) is a superset of U.P.C. EAN-8 and consists of 8 digits for small packages.

**QR.** QR-Code is an efficient, two-dimensional (2D) barcode symbology that allows easy encoding of MECARD data including phone numbers and web URLs.

**ITF.** Interleaved 2 of 5 (ITF) is a numeric-only barcode used for encoding pairs of numbers in a high density barcode format similar to code 128 character set C.

**Code 39.** The Code 39 barcode is the easiest to use of alpha-numeric barcodes and is designed for character self-checking, thus eliminating the requirement for check character calculations.

**Code 128.** A very effective, high-density symbology which permits the encoding of alphanumeric data. The symbology includes a checksum digit for verification, and the barcode may also be verified character-by-character verifying the parity of each data byte.

Are you in need of a barcode? It can be difficult to know where to look, but fortunately, MobileDemand makes it easy.

## Barcodes – Random or Registered

**Barcodes are useful in countless applications, covering everything from inventory management, retail sales and tracking medical supplies. The most common use is in retail and supply chains. These barcodes are placed to help with inventory tracking and management.**

It's essential you have the proper barcode for how you intend to use it. If you have a product and plan to sell it in stores across the nation or the world, rather than just inside your internal business, you must register it.

That's not to say you must go to great expense to get a barcode. In the case of selling a product, the first step is to

register your product with GS1 US. This is a globally accepted standard that enables barcodes to be designated for individual products. This number is known as a UPC. This prevents barcodes from getting crossed, which makes them impossible to use. While GS1 keeps things organized by assigning every product from every company a unique number, it only registers barcodes, it does not create them. That's where MobileDemand comes in.

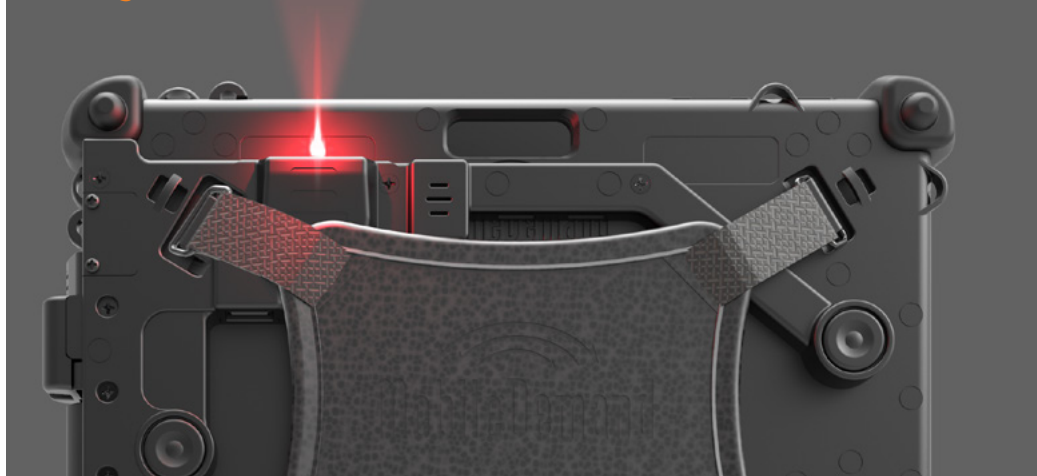

## Free Barcode Generator

There are many barcode generators out there, but frequently they require a fee either through subscription or on a per barcode basis. At MobileDemand, we offer a free barcode generator so you can keep your business productive and efficient. Simply put in your unique barcode number and fill out the boxes, and in no time, you will have your barcode generated.

UPCs (Universal Product Codes) are not the only types of barcodes. EAN-8 barcodes are used for smaller packages due to shorter numbers and smaller sizes. 2D barcodes are also available, such as a QR (quick response) code which can convey more data than a standard 1D barcode. A QR code is a type of barcode that is popular for consumer use since it can easily be read by a smartphone.

MobileDemand's barcode generator can make EAN-13/UPC-A, EAN-8, QR, ITF, Code 39, and Code 128 barcodes. Barcode images can be downloaded as a PNG, PDF, or GIF file, or you can create multiple barcode sheets, allowing you to print more barcodes faster.

**Since its inception, the MobileDemand Barcode Generator has generated more than 500 million barcodes.**
